

# Day 3: Display Information from an Object

## Displaying Information contained in Objects

[Stack Overflow](#) has a nice, well summarized tutorial related to displaying information contained in objects.

### Task

Write a JavaScript program to display the status (i.e. display book name, author name and reading status) of books. You are given an object *library* in the code's template. It contains a list of books with the above mentioned properties. Your task is to display the following:

- If the book is unread:

You still need to read '<book\_name>' by <author\_name>.

- If the book is read:

Already read '<book\_name>' by <author\_name>.
